Kubtec receives pre-market certification for XPERT 20

Milford, CT, January 12, 2009. Kubtec has received certification to market its XPERT 20 digital specimen radiography device from the FDA. This 510(k) pre-market certification notification adds its newest, most compact digital cabinet x-ray system to the KUBTEC line of specimen radiography systems. With a footprint of less than 10” x 12”, the XPERT 20 is designed specifically for the biopsy suite. When compact size, ease of use, and high resolution images are demanded, the XPERT 20 provides the ability to locate the smallest micro-calcifications in seconds.

With zero warm up time, the XPERT 20 offers AEC (automatic exposure control), auto-calibration, automatic window leveling and the ability to send multiple images, with annotations to PACS. The XPERT 20 is available with the option of two digital detectors sizes, 2” x 2” or 2” x 4”, and DICOM compliant software.

#####

ABOUT Kubtec – Kubtec is a manufacturer of compact digital x-ray inspection systems for specimen radiography, science and research, security, and non-destructive testing. Kubtec is also the only manufacturer of the world’s largest 400 mm x 400 mm digital detector based specimen radiography system.
