## **Siemens selects the XPERT 40 as part of its women's imaging product line**

Fairfield, CT, June 13, 2008. Siemens Medical Solutions USA, Inc., the Malvern, Pennsylvania-based division of Siemens AG, will now offer the XPERT 40 digital specimen radiography system from KUBTEC as an accessory with its distinguished line of women's imaging products. After evaluating all the products available on the market Siemens has decided to exclusively offer the XPERT 40 with its superior image quality, compact size, mobility, and reliability.

The "Next Generation" XPERT 40, introduced at RSNA 2007, is the world's only specimen radiography system available with 16-bit contrast resolution and 1.0 mA x-ray source output, enabling it to image the smallest micro-calcifications in the largest specimens in a few seconds. Available with a number of exclusive features, the XPERT 40 has been attracting a lot of attention in the women's imaging community.

The XPERT 40 is reliable and easy to operate. Zero warm-up time and automatic calibration add to its ability to acquire images in a few seconds. Multiple images with annotations can be sent directly to PACS with a single click. Compact size, user-friendly software, and standard AC power requirements allow the XPERT 40 to be conveniently located and operated in most clinical environments.

#####

**About Kubtec** – KUB Technologies, Inc. is a manufacturer of compact digital x-ray inspection systems for a variety of applications including specimen radiography, science and research, security, and non-destructive testing. Systems and components along with local support are available around the world. Visit [www.kubtec.com](http://www.kubtec.com) for additional information.
