## **Kubtec Signs Sales Agreement with Hologic to Offer the XPERT Digital Specimen Radiography System**

Fairfield, CT, July 8, 2008. Kub Technologies, Inc. has signed a distribution agreement with Hologic, Inc. (HOLX: NASDAQ), the Bedford, Massachusetts based women's healthcare company, to offer the Kubtec Xpert 40™ mobile digital specimen radiography system. The Xpert 40 is a self-contained, shielded cabinet X-ray system designed to meet imaging requirements for surgically excised and needle core biopsies.

Introduced in 2007, the 'next generation' Xpert 40 has 16-bit contrast resolution and 1.0 mA x-ray source output, enabling it to image the smallest micro-calcifications in the largest specimens in a few seconds. The equipment delivers film or digital x-ray images. Zero warm-up time, AEC (automated exposure control) and automatic calibration add to its ability to acquire images in a few seconds. Multiple images with annotations can be sent directly to PACS with a single click. Compact size, user-friendly software, and standard AC power requirements allow the Xpert 40 to be conveniently located and operated in most clinical environments.

"This addition to the Hologic product line helps us better meet the needs of our mammography and breast surgeon customers," said John Pekarsky, Senior Vice President of Sales and Strategic Accounts at Hologic. "With the Kubtec system, our customers can shorten the time it takes from performing a biopsy to giving the patient a diagnosis. This is a huge help in significantly lowering patient anxiety."
